

Before installing the **TAIL SWITCH** (twist the **RING** anti-clockwise to the end), make sure that the inner part is not protruding out of the outer thread.

Do ✓

Don't ✗

Install the **TAIL SWITCH** to the **TUBE**, make sure that you twist on the **below Green Arrow part first**, not on the **RING**

Twist as tight as you can, make sure there is no gap here.

Finally, twist the **RING** clockwise as tight as you can.

If this **RING** is not twisted tightly, then the light will have the “chance” of turning ON/OFF or switch the Mode during your dive.
